Foreword

Statement of Intent

Welcome to the City Council’s Health and Safety Standards for Schools. Coventry City Council recognises its responsibility as an employer and provider of services and seeks to ensure an active health and safety culture throughout schools by encouraging schools to strive to meet and adhere to all relevant UK and EC legislation and codes of practice.

The Council will provide competent technical advice on health and safety matters through the Occupational Health, Safety and Wellbeing team to assist head teachers in their task of ensuring healthy and safe conditions in the workplace.

Health and Safety is an important part of school life and keeping children and adult’s safe is essential within our teaching and learning environments. Children should be able to experience a wide range of activities, safely and healthily adhering to the standards should help them to do so. It is important that children learn to understand and manage day to day risks, whilst enhancing learning and innovation.

The City Council’s Health and Safety policy reflects this approach, confirming its commitment to the principles of sensible risk management as outlined by the Health and Safety Executive. The Authority requires all schools to demonstrate compliance with health and safety legislation and exercise due care and attention to health and safety matters by adopting a sensible approach to health and safety.

By focusing on how significant risks are managed through a robust risk assessment approach, schools can ensure control measures are suitable, sufficient and proportionate to the risks of an activity. Employees should be encouraged to adhere to safe systems of work and safe work practices in compliance with statutory legislation and the general duty of care required by schools in line with City Council’s health and safety policy and procedures.

This Health and Safety Standards in Schools document outlines the minimum standards to enable everyone to undertake their roles and responsibilities and fulfil their potential free from work related injury or ill health; this includes, governors, managers and leaders, employees, service users, pupils, partners and others who may be affected by the school’s work activities. It is therefore important that both head teachers and governing bodies ensure that the requirements of these standards are implemented.

Should you have any further queries or questions regarding the content of this document, please contact the Occupational Health, Safety and Wellbeing Service on 02476 83 3285 or email: healthandsafetyadmin@coventry.gov.uk

Introduction

The Local Authority’s health and safety standards for schools take account of the government review of health and safety legislation and commitment to the principles of sensible risk management. The standards also apply the principles of the Health and Safety Executive’s Education Health and Safety Guidance and the Department for Education’s Health and Safety: Advice on Legal Duties and Powers publication.

Which types of schools are these standards for?

- Local authority maintained schools where Coventry City Council is the employer, i.e. community and voluntary controlled schools, community special schools and maintained nursery schools. The standards laid down within this document are the minimum Local Authority Maintained schools must adhere to.

- Other schools such as voluntary aided, foundation schools, academies and free schools may use these standards for reference for their own employer health and safety arrangements.

Who are these standards aimed at?

- Head Teachers, Senior Leadership teams, School Business Managers
- Site Managers/Site Service Officers and other relevant school staff
- Governing bodies
- Providers of health and safety services engaged by schools, to ensure that they follow the LA’s minimum health and safety standards

These standards will be kept under review and updated as necessary. The information contained within this document is based on current legislative requirements and minimum standards expected by the local authority.

General Information for Schools

The Law

Under the Health and Safety at Work etc. Act 1974, the school employer has overall responsibility for health and safety, and must take reasonable steps to ensure that the staff and pupils are not exposed to significant risks to their health and safety. This applies to activities on or off the school premises. Responsibility for health and safety cannot be devolved; the employer must provide oversight and monitoring.

The Local Authority is the employer in community and voluntary controlled schools, community special schools and maintained nursery schools. The governing body is the employer in voluntary aided and foundation schools. The academy trust or governing body is the employer in academy schools.
The management of Health and Safety at Work Regulations 1999 set out in more detail what actions school employers are required to take. As a summary this includes:

- Assessing the risk to staff and others affected by school activities in order to identify the health and safety measures that are necessary and keep a record of any significant findings (significant risks)
- Introduce measures to manage those risks
- Inform employees about the risks and measures to be taken to manage the risks
- Ensure that adequate training is given to employees on health and safety matters
- Where two employers share the same premises they must cooperate and coordinate on health and safety matters and inform other employers of any risks to their employees

All school employees have a duty to look after their own and others’ health and safety and have a duty under common law to take care of pupils the same way that ‘a prudent parent’ would do so. Employees must also cooperate with their employer on health and safety matters, carry out their work in accordance with training and instructions, informing them of any work situation representing a serious and immediate danger, so that remedial action can be taken in a timely manner.

**Responsibilities of Schools**

The head teacher and governing body (as a management body) have overall day to day responsibility for health and safety in the school and must ensure that:

- The school employer's health and safety policy is followed and effective arrangements are in place for managing health and safety risks at the school
- Effective communications are in place with governors and staff, giving clear information to pupils and visitors, including contractors, regarding significant risks on site
- Staff have appropriate training and competency to deal with risks in their areas of responsibility
- Effective consultation is in place with recognised trade union safety representatives/employee representatives
- Staff understand their responsibilities and know how to access support and advice to help them manage risks responsibly
- Where responsibilities are delegated to specific managers and staff, ensure those nominated are competent, and understand and accept the responsibility being delegated to them
- Managers and staff with delegated health and safety responsibilities have sufficient authority and the time and resource to fulfil their role
- They comply with the 'Local Authority Fair Funding Scheme of Delegation' which sets out the conditions with which governing bodies must comply in managing the expenditure of the school with regard to the Local Authorities responsibility for health and safety
Health and Safety Advice

Health and safety law requires employers to appoint someone competent to help them meet their health and safety duties. Head Teachers and governing bodies must ensure that whoever is appointed has appropriate qualifications, knowledge and suitable experience to provide appropriate health and safety advice to the school. Further information about appointing a competent person can be found at http://www.hse.gov.uk/involvement/competentperson.htm

The City Council will expect all health and safety providers to be competent and to be registered with a recognised professional body, e.g. Institute for Occupational Safety and Health (IOSH).

Head Teachers and governing bodies must ensure that whoever they appoint are made aware of the standards contained within this document.

Schools where the LA is the employer must still adhere to all City Council health and safety policies and standards irrespective of who provides their competent health and safety advice.

The Coventry City Council Occupational Health, Safety and Wellbeing Service can provide Health and Safety advice as part of a Service Level Agreement. For further information please contact the Occupational Health, Safety and Wellbeing Service on 024 7683 3285 or email: healthandsafetyadmin@coventry.gov.uk

Health and Safety Policy

Key points:

- In Local Authority Maintained Schools, the requirements of the City Council Health and Safety Policy must be fully implemented
- Responsibilities of Head Teachers and school staff are covered within this document
- In addition health and safety arrangements documents should be in place, kept up-to-date and regularly reviewed, as part of ongoing monitoring and review
- Review timescales for health and safety arrangement are identified within this document
- The arrangements must detail school specific health and safety procedures, reflecting actual practice within the school
- The extent of information will vary dependent upon the size of the school and its activities. For example, the arrangements for a small infant school may be very brief, whereas a large secondary school with a range of laboratories and workshops will be much more detailed
- Arrangements should be proportionate, effective and appropriate
- Areas to consider include incident reporting, first aid, fire safety, manual handling, slips, trips and falls, work at height etc.
- Secondary schools can also use the template as a basis for their more detailed written arrangements
Other policies and guidance

Key points:

- The LA has other written health and safety policies and guidance that community and voluntary controlled schools must follow and adhere to. These are included in the health and safety schools website document library at http://www.coventry.gov.uk/info/188/health_and_safety/2389/schools_health_and_safety/6
- Head Teachers and senior leadership teams are required to have in place arrangements for monitoring and reviewing the effective implementation of the LA’s health and safety policies and guidance at regular intervals
- There should be a recorded process in place to communicate local authority health and safety policies and guidance to relevant staff

Health and Safety Arrangements

Generic Risk assessments

Key points:

- Schools have a duty to assess the risks to staff and pupils and any other person who is affected by their activities, e.g. parents, volunteers, visitors/contractors etc.
- The term risk assessment is used to describe the process of thinking about the risks of school activities and the steps taken to control them
- Written risk assessments should be in place to record the significant findings (significant risks; the things that can cause real harm)
- Sensible risk management does not mean that separate written risk assessments are required for every activity
- Schools should always take a common sense and proportionate approach, remembering that risk assessments are tools to enable people to undertake activities safely, not prevent them from taking place
- Sensible risk management cannot remove risk altogether but it should avoid needless or unhelpful paperwork
- The Coventry City Council Risk Assessment Guidance provides further information, on how to conduct risk assessments. The significant findings of the risk assessment must be recorded
- Findings of risk assessments should be communicated to relevant staff and others who are likely to be affected
- Persons carrying out risk assessments must be competent (see health and safety training)
- Risk assessments must be kept up-to-date and be regularly reviewed, at least annually or sooner where required, particularly if circumstances change
- Where model risk assessments are used they must always be adapted to the local school environment and activities being undertaken
Specific Risk Assessments

- Some activities, especially those happening away from school such as an off-site trip, may involve higher levels of risk and a specific risk assessment will be needed.
- However, schools do not need to carry out a new risk assessment for every off-site visit that usually forms part of the school day, e.g. taking pupils to a local venue which it frequently visits, such as a church or park etc. Any risks from these routine activities should have already been considered at the planning stage.
- In addition, in some curriculum areas where there is a greater element of risk particularly in secondary schools, specific risk assessments will need to be undertaken. Examples include design and technology, art, science, physical education and school sports activities. *(See curriculum specific section for further information)*
- It may also be appropriate for schools to complete specific risk assessments for individual pupils with challenging behaviour, disabilities, special educational needs and additional support needs. Schools should work together with relevant agencies to do this.
- Other specific assessments for certain areas of health and safety may also be required, e.g. COSHH, display screen equipment, manual handling, working at height, personal safety, new and expectant mothers etc.
- Schools need to also assess risks from vehicle movements on their premises and manage risks in line with current workplace transport guidance, e.g. segregation of pedestrians and vehicles, marking and lighting etc. Schools need to also consider in their risk assessment, vehicle movements occurring immediately outside the premises which may be associated with school activities, such as staff arriving and leaving, school buses and taxis, delivery vehicles, parents parking, dropping off, collecting etc.

Health and Safety Training

Key points:
- Schools must ensure that staff are given appropriate health and safety training for their job.
- In some cases, attendance on a formal training course will not be required and it may simply mean providing staff with basic information and instructions about health and safety generally within the school.
- Health and safety inductions checklists should be used by schools to assist with this process and records should be kept of all inductions undertaken.
- In other cases, there will be the need to attend more formal courses. The Occupational Health, Safety and Wellbeing Service provide a number of professional health and safety training sessions for schools.
- Where training is sourced from external providers evidence of the learning outcomes and satisfactory understanding by delegates should be kept by the school to demonstrate competence.

The following training is mandatory for schools where the LA is the employer. Training should be refreshed every 2 years:

- **Health and Safety Awareness** – for head teachers, governors and leadership teams.
- **Premises management** – includes moving and handling, working at height, water hygiene management and asbestos awareness for Site Service Officers
- **Risk Assessment Workshop Training** – on-line and delivered training for managers/staff carrying out risk assessments for school activities
- **Selection and Management of Contractors on site** – for Head Teachers and other persons in school involved in the commissioning, appointing, management and monitoring of contractors, e.g. Business Managers, Facilities Managers / Site Services Officers etc.
- **Fire Risk Assessment** – for the responsible person in charge of the premises where an external competent provider is not used
- **Fire Safety and Fire Marshal Training** – on-line and delivered training available for all employees in school
- **First Aid at Work Certificate** – based on risk assessment

The following courses should be undertaken for schools where the LA is the employer and should be refreshed every 2 years with the exception of first aid training:

- **Working Alone in Safety/Dealing with Violence and Aggression** – for Site Services Officers and those who work alone e.g. staff conducting home visits, working late or remotely
- **Infection Control in a School Setting** – For Site Services Officers and any teaching or support staff working in the education sector
- **Safe Use and Inspection of Ladders** – for Site Service staff whose role requires them to work at height using steps and ladders
- **First Aid at Work Refresher Course** – (Refreshed three yearly) where a First Aid at Work Certificate is already held and the need is based on risk assessment

Other key points

- Schools will need to consider attendance on other training programmes for specific school staff as appropriate, e.g. paediatric and visit leaders first aid, manual handling of objects and people, display screen assessor and managing conflict and aggression
- In curriculum areas where there is a greater element of risk, particularly in secondary schools, **specific formal training will need to be undertaken** for certain activities e.g. design and technology, art, science, physical education and school sport etc. Schools must access competent training for the relevant curriculum area. *(See curriculum specific section for further information)*
- Support staff such as admin staff, cleaners may also need to undertake specific training, such as manual handling, COSHH etc.

**Health and Safety Workplace Inspections**

**Key points:**
- Schools must ensure a safe place of work and safe working environment for everyone who uses the site
- In practice, this can be done day-to-day by school staff as a routine visual inspection/check of their work areas
- However, it is the LA’s policy for all Local Authority Schools including schools where the LA is the employer, to also undertake a more formal health and safety workplace inspection on a termly basis
• More frequent health and safety inspections may need to be considered in areas of greater risk
• An inspection is a simple way of identifying and evaluating any health and safety hazards in school that could cause harm, as well as an opportunity to checks records and documentation. It should concentrate on physical and environmental hazards, e.g. slippery surfaces, trailing cables, uneven floor/steps, unsafe equipment/machinery/fixtures, poorly stored chemicals/substances etc.
• The inspection should cover all internal and external areas of the school, including store rooms, car parks, boiler houses and other areas which can be safely accessed
• The process should then concentrate on taking any appropriate action needed to remove any dangers
• Formal inspections must be undertaken by a competent person who is suitably experienced and has ability to correctly identify and evaluate hazards. Inspections should be recorded. Persons with no experience can attend but as a minimum should have undertaken risk assessment training as a basic introduction to the understanding of workplace hazards
• In a secondary school environment, where greater hazards exist in laboratories and workshops the inspection process should be undertaken by or with somebody who has suitable knowledge and experience of the environment
• Special schools with different building facilities involving the management of pupils with special educational needs and other complex needs should consider this competence requirement as well
• The City Council School's workplace inspection form can be used for workplace inspections and provides further information on areas to inspect and what to look for
• Alternative inspection forms used must cover all areas and sections on the City Council inspection form, record any remedial actions and provide an action plan for closure of items
• Governors and Governing bodies should be involved in carrying out walk-through inspections of the school to help supplement the formal health and safety workplace inspection

Classroom Checks

Key points:
• In addition to formal health and safety workplace inspections, school should ensure that appropriate daily visual checks are undertaken by staff in classrooms/work areas
• The Health and Safety Executive (HSE) have produced a simple one page ‘classroom checklist’ for schools that wish to record the checks undertaken; although this is not mandatory www.hse.gov.uk/risk/classroom-checklist.htm

Accident/Incident/Near Miss Reporting & Investigation

Key points:
• Schools must have a system in place to record, report and investigate all accidents, incidents and near misses and take any necessary and appropriate action to prevent recurrences
• In schools where the Local Authority is the employer, all employee accidents/incidents/near misses must be reported to the City Council by using the SHE Assure accident/incident/near miss reporting system

• There is a legal requirement under the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) for certain types of accidents/incidents to be reported to the HSE. This is undertaken by the City Council Occupational Health, Safety & Wellbeing Service for schools where the Local Authority is the employer

• Incidents involving school pupils should be reported to the City Council using the SHE Assure accident/incident/near miss reporting system where the incident arises out of or is in connection with work. Section 2 of the Health and Safety guidance information document EDIS 1 identifies the criteria of what is considered to be arising out of or is in connection with work

• Pupil accidents that fall outside of the scope of Section 2 of EDIS 1 should be recorded in school only

• Incidents involving members of the public on site are also required to be reported where the member of public is taken from the scene of the incident to hospital for treatment

• For more information please refer to the accident/incident reporting guidance on the health and safety schools website document at http://www.coventry.gov.uk/schoolshands

Asbestos

Key points:

The Control of Asbestos Regulations (CAR) 2012 Regulation 4 places a specific legal duty to manage asbestos on the owners and/or those responsible for maintenance in non-domestic premises. Subsequently Head Teachers and Governing Bodies have a duty to safely manage any asbestos containing material in school buildings and on school sites within their control.

• Head Teachers and Governing Bodies must ensure that there are asbestos (Management) surveys in place to identify where asbestos containing materials are located within school buildings. School’s built after Dec 31st 1999 can be considered to be asbestos free

• Head Teachers and Governing Bodies must also ensure that there is a local asbestos management plan in place identifying;
  - Local responsibilities of managers and key staff within the school
  - That a six monthly inspection and review of the ongoing condition of asbestos containing materials is undertaken
  - Emergency procedures are in place in the event of damage to asbestos containing materials

For more information, advice and guidance contact the City Council’s Asbestos Officer: email yvette.liening@coventry.gov.uk
Legionella/Water hygiene

Key points:

- Head Teachers and Governing Bodies must ensure that there are effective measures in place for the management and control of legionella risks from water systems in school buildings under their control.
- The City Council Water Hygiene guidance and procedures must be followed by schools and actions carried out. The following key information must be provided to staff:
  - roles and responsibilities including training/competence
  - risk assessment; maintenance works & monitoring
  - record keeping
  - water sampling
  - actions to be taken in the event that legionella is detected and actions to be taken in the event of a legionella outbreak

For more information, advice and guidance contact the City Council Water Hygiene Officer: email: phil.mcgarry@coventry.gov.uk

Building General Maintenance

Key points:

- Schools are responsible for ensuring that the whole school environment is safe for pupils, staff and visitors. This can include dealing with day to day reactive maintenance issues.
- A defect reporting system must be place for staff to report any issues affecting the school environment. Additionally an ongoing termly site inspection must be undertaken to identify ongoing building condition and areas where work is required.

Educational Visits/ Off Site Trips

Key points:

- Schools must follow current CCC educational visits guidance and the Outdoor Education Advisors Panel (OEAP) national guidance to demonstrate that they are taking responsible steps to manage risks.
- There is also an LA requirement for schools to appoint an Educational Visits Coordinator (EVC) and ensure they attend CCC EVC training as part of their competence.
- The EVC should be a member of the school senior leadership team and senior member of staff who should be provided with sufficient time and resource to carry out the role effectively.

For more information contact Sarah Atkins Educational Visits Advisor: email sarahatkins@plasdolymoch.co.uk

Fire Safety Management

Key points:

- Schools must ensure a high standard of fire safety management throughout their buildings and premises.
• Schools must aim to effectively reduce the risk of fire, protect property, maintain day to day school activities but most importantly, **protect life**
• Under fire safety legislation a suitable and sufficient fire risk assessment must be in place to identify fire hazards and evaluate the risks
• The fire risk assessment must take account of special risks, including persons with disabilities or mobility difficulties, as well as any persons sleeping or resident on school premises
• Based on the findings of the assessment, schools are responsible for ensuring the appropriate action is taken and for ensuring that adequate and appropriate fire safety measures are in place to minimise the risk of injury and loss of life in the event of a fire

Fire safety measures should include:

• Controlling sources of fuel and ignition in school
• Effective housekeeping and storage arrangements
• Having adequate means of escape available for all occupiers of the building including those people who require support or assistance (Personal Emergency Evacuation Plans)
• Adequate detection and warning systems (fire alarm, smoke and heat detectors, signage etc.)
• Fire evacuation procedures, a marked up floor plan of emergency routes & equipment and a school fire and emergency plan, detailing what action will be taken in the event the school premises are not occupiable as a result of a fire
• Firefighting equipment (extinguishers)
• A recognised internal and external maintenance, inspection and testing regime for fire safety which must include as a minimum:
  - fire extinguishers.
  - fire alarm detection and warning systems.
  - automatic suppression systems (sprinklers)
  - door control mechanisms.
  - smoke control systems (fire dampers and exhaust ventilation systems).
  - emergency voice communication systems (refuges).
  - evacuation and fire-fighting lifts.
  - emergency lighting.
  - standby power systems.
  - lightning conductors.
  - electrical equipment and systems.

• Records of tests, maintenance and drills carried out (fire precautions log book)
• Fire safety training appropriate to staff in school

**Fire Risk Assessment Framework**

Fire risk assessments in schools must be undertaken by a competent person and be recorded.

Competence is defined as somebody with:

• Current knowledge and an understanding of fire safety legislation and assessment
Training, knowledge and experience in the principles of fire safety and fire hazards/risks
An understanding of building structure of the types of building being assessed, with regard to fire spread, prevention and protection
Understanding the fire development and the manner in which people behave when exposed to fire
An appropriate academic level qualification
Training and experience in understanding fire risk assessment for a diverse range of premises/activities, and larger premises
Preferably a third party accreditation with demonstrable continued professional development and current membership of a recognised industry association e.g. Institute of Fire Engineers, Fire Industry Association, Fire Protection Association, Association of Specialist Fire Protection etc.
The fire risk assessment must include a visual inspection and assessment of the buildings fire resistance to confirm the integrity of compartments, void spaces, walls, ceilings and doors to prevent and minimise the spread of fire or smoke
The school's fire risk assessment and fire and emergency plan must be reviewed annually; documents must be reviewed sooner following any significant changes to the building or room use, as part of any refurbishment/construction projects, following a fire or other emergency incident or after an unacceptable fire drill
The review should be undertaken by the school based on the original assessment with support from the competent person
Actions plans produced from the assessment should include three main areas covering:
  - local management actions
  - repair and maintenance
  - structural fire barrier actions (which relate to the compartmentation and fire resistance provided by fire barriers within the structure of the buildings)
Schools are responsible for ensuring that appropriate action is taken from the assessment undertaken

Other key points

In schools where the LA is the employer, Fire Safety Awareness by all staff and Fire Marshal training must be completed by relevant staff in line with Council timescales (See Health and Safety Training). A record of training must be completed and retained by schools

First Aid / Health / Medical

First aid- key points

Schools must ensure they have sufficient, competent first aid provision for staff and children
The numbers of trained first aiders is based on an assessment of risk, considering the size of the school and activities taking place
The Health and Safety Executive website provides further information about conducting a first aid needs assessment and first aid requirements
The DfE have produced a guide on the provision, installation and maintenance of automated external defibrillators on school premises. A copy can be downloaded from the www.gov.uk website
• Under the Statutory Framework for the Early Years Foundation Stage, foundation stage classes in nursery, infant and primary schools must have at least one person with a current paediatric first aid certificate on the premises at all times when children are present. They must also accompany children on any off site visits/trips. Additionally first aid treatment for Early Years Foundation Stage provision must be recorded individually in a first aid treatment book using one page to record each child’s treatment
• First aid training including paediatric training must be sourced from a competent provider. Competent first aid training can be accessed through the Occupational Health, Safety and Wellbeing Service

For more information and advice, contact Coventry City Council’s Occupational Health, Safety and Wellbeing Service on (024) 7683 3285

Health/Medical - key points:

• Advice and guidance on health issues and the management of medical needs for children can be obtained from the School Nursing Service and the City Council Occupational Therapy Team. Further detailed and specialist advice including infection control in schools and other childcare settings can also be obtained from the Occupational Health, Safety and Wellbeing Service or Public Health England at https://www.gov.uk/government/publications/infection-control-in-schools-poster
• Public Health England should be contacted for advice on any communicable diseases within school. Tel 0344 225 3560. The Occupational Health, Safety and Wellbeing team must also be informed of any communicable diseases within school and any communication with Public Health England
• The Department for Education provide guidance on supporting pupils at school with medical conditions on their website. Links to other useful resources are also included

Maintenance, Inspection, Testing & Use of Machinery and Equipment

Key points:

• Schools are responsible for ensuring that equipment and machinery used for school activities is suitable, fit for purpose and maintained; and that any risks are prevented or controlled
• Those that use equipment and machinery must be instructed on its safe use, with appropriate visual checks undertaken prior to use
• Schools are responsible for identifying equipment and machinery that must be formally inspected and tested in accordance with relevant legislation and manufacturer’s guidance. It must be carried out by a competent person
• Records of inspection and testing undertaken must be retained by schools and be accessible
• Any defective equipment must be taken out of use, discarded or repaired by a competent person
• Schools must take action from any recommendations given and ensure a record is made
Portable Electrical Appliance Equipment and Stage Lighting

- Should be formally inspected and tested by a competent person in accordance within schools’ assessment of risk
- Testing must be completed at regular intervals. The recommended City Council review period is every 2 years (with hand held power tools tested annually)
- A portable appliance test register should be held by the school and any items identified as defective should be removed from service and either repaired using a reputable provider or replaced

Coventry City Council Occupier Support Service are able to carry out portable appliance testing for schools. For more information contact: Occupier Support; e-mail: fmuoccupiersupport@coventry.gov.uk

Access Equipment (step ladders/ladders, kick stools, mobile tower scaffolds)

- Formal inspections of ladders will vary in accordance with their usage in school.
- Coventry City Council’s working at Height guidance provides further detail including the following guidance for schools on the safe working at height and maintenance and inspection of access equipment.
- Access equipment must be inspected annually by a competent individual who has been trained
- School staff who use ladders and stepladders for an integral part of their job must undertake working at height training on the safe use of access equipment
- Training in working at height can be provided by CCC Occupational Health, Safety and Wellbeing Service (See Health and Safety training). The training will also provide the required competence for any staff in school that carry out formal inspections of ladders/stepladders
- School staff using mobile tower scaffolds must attend and pass the basic prefabricated access suppliers and manufacturers association (PASMA) tower scaffold training course. Mobile tower scaffolds must always be assembled and inspected in accordance with the manufacturer’s guidance by someone trained and competent in assembly and inspection

Outdoor Play Equipment

- Must comply with current standards adopted by the play industry; EN: 1176 (play equipment) and EN: 1177 (safety surfacing). All equipment supplied must have a certificate of conformity. The following inspections should take place
  - Routine inspection-basic pre use visual check by competent school staff (defects, breakages, cleanliness of area etc.) must be conducted daily and weekly. Weekly inspections must be recorded and signed
  - Operational inspection- detailed inspection of equipment by persons qualified to Register of Play Inspectors International standards; focuses on equipment compliance and long-term structural problems with a written report provided. Operational inspections must be completed on a termly basis
  - Annual inspection- detailed independent inspection of equipment by persons qualified to Register of Play Inspectors International standards; must be completed annually to ensure ongoing equipment compliance
and long-term structural integrity. Where problems are identified a written report must be provided with an action plan

- When siting any new play equipment, schools should be mindful of existing structures and trees roots etc. A post-installation inspection must be carried out for all new equipment installed or where equipment has been moved or relocated

**Pottery Equipment**

- Must be inspected and tested by a competent contractor on an annual basis in accordance with current HSE guidance
- **CLEAPSS** (Consortium of Local Education Authorities for a Provision of Science Services) provide further specialist guidance on many topic in ceramics including kilns which schools should follow

**Fume Cupboards and Local Exhaust Ventilation**

- Must be inspected, examined and tested by a competent contractor at periods no greater than 14 months with remedial work undertaken
- Further guidance on the safe management of local exhaust ventilation system and dust extraction can be found on the HSE’s website at [www.hse.gov.uk/lev](http://www.hse.gov.uk/lev)
- The **CLEAPSS website** also provide guidance on local exhaust ventilation systems within school science rooms and design and technology workshops

**Lifting Equipment**

- Lifting equipment for lifting people and accessories associated with lifting gear must be thoroughly examined by a competent persons every 6 months
- All other lifting equipment such as goods lifts must be thoroughly examined at least every 12 months
- Lifting equipment must be included on the schools preventative maintenance schedule. Thorough examination should not be confused with preventive maintenance, although they have some elements in common. Preventive maintenance usually involves replacing worn or damaged parts, topping up fluid levels and making routine adjustments to ensure risks are avoided. Thorough examination may act as a check that maintenance is being carried out properly, but is not intended to replace it

Further guidance and information on thorough examination and inspection requirements, contact the City Council Statutory Compliance team: email craig.daffron@coventry.gov.uk

**Other Plant and Equipment**

Any other plant and equipment should be inspected and tested in accordance with legislation and manufacturer’s guidance. This includes electrical installations, gas appliances, pressure systems and other on-site equipment such as electrically powered gates/barriers etc.

Health and safety guidance for powered (automatic) gates and doors provides further information for schools on management and maintenance requirements.
Further guidance from the LA and other national recognised organisations should also be referred to for maintenance, inspection and testing requirements:

- For design and technology equipment - refer to CLEAPSS and British Standard 4163:2014 - Health and Safety for Design and Technology in Schools and Similar Establishments - Code of Practice
- For physical education/sports equipment - refer to relevant sections of the current ‘Safe Practice in Physical Education and Sport’ publication www.afpe.org.uk. Contractors should be a minimum of Sport Safe accredited

**Selection and Management of Contractors**

The selection and safe management of contractors on school sites is an essential and an important part of health and safety for Head Teachers and governing bodies. It is important that when we talk about contractors we just don’t just consider construction work but all contractors who provide procured services to schools. Head Teachers and governing bodies must ensure that the contractors they use comply with health and safety law to ensure the safety of employees and others who are affected by their activities.

**Key points:**

- Schools must review the health and safety documents and arrangements of any contractor they wish to use as part of the schools procurement process. The arrangements contractors have in place must be fully implemented for the activities they undertake within school
- Where construction work takes place the management and monitoring of contractors must comply with the Construction (Design and Management) Regulations 2015
- It is a legal requirement in schools to appoint a competent person with sufficient knowledge to safely manage and monitor contractors working on site (see health and safety training section)
- A principal designer and principal contractor should be appointed in accordance with CDM regulations 2015
- Construction work should be planned, and for all works a construction phase plan developed to ensure that sufficient time and resources are given for the work to go ahead safely
- Where projects are notifiable an F10 must be completed and submitted to the Health and Safety Executive
- Suitably qualified and competent contractors should be appointed to undertake the work. Contractors, as a minimum should be accredited to the Safety Schemes in Procurement (SSIP). [http://www.ssip.org.uk/](http://www.ssip.org.uk/)
- Further information which must be followed by schools can be found in the City Council Contractors guidance

**Management of Work-Related Stress and Wellbeing**

**Key points:**

- Schools have a responsibility to promote the importance of health and wellbeing for preventing/reducing the incidence and impact of work-related stress through effective management commitment and support
The City Council promotes the HSE management standards approach to identifying and managing the causes of work-related stress both at senior leadership team and staff level.

- The City Council Stress and Wellbeing Policy provides further detailed information which must be followed.
- The LA has also produced individual and team/role stress risk assessment template forms for use where deemed appropriate by certain risk factors.
- The City Council requires a Mandatory Wellbeing Audit to be undertaken in schools in conjunction with the City Council Health and Safety Audit Programme. This is carried out by the Occupational Health, Safety and Wellbeing Service.

Manual Handling, including the moving and handling of people

Key points:
- Schools have a duty to protect those carrying out manual handling activities from the risk of injury
- A risk assessment must be completed for all general manual handling activities.
- A specific risk assessment may be required for individuals who have a pre-existing medical condition or are involved in higher risk activities.
- Schools also have a duty to protect both staff and pupils from the risk of injury when carrying out manual handling activities involving the moving of children and young people, and lifting or carrying must be avoided unless it is clearly detailed in an individual’s care plan and a risk assessment is in place.
- Further information can be found in the CCC Moving and Handling Guidance. This specific guidance covers:-
  - roles and responsibilities
  - safe moving of inanimate objects and people
  - training and competence
  - maintenance, test and inspection of manual handling equipment.
  - risk assessment
  - use of handling plans and procedures

Personal Safety

Key points:
- Personal safety is a shared responsibility between a school and its staff.
- Schools must take reasonable steps to ensure that staff are able to work in a safe environment and assess and control risks from violence or the threats of violence as well as lone working.
- The City Council Prevention of Work Related Violence and Aggression Guidance provides further information which schools must follow to control risks to the lowest practical level.
- In addition, the Occupational Health, Safety and Wellbeing Service have produced guidance documents which cover lone working, managing violence and aggression and working in a person’s home.
- Managing Conflict and Aggression training is available to schools (See Health and Safety Training section).
Challenging Behaviour / Physical Intervention

Key points:
- It is important that challenging behaviour is managed within school settings to ensure the safety and well-being of employees, pupils and others who may be affected. A risk assessment should be undertaken where challenging behaviour is presented. This should help to identify supportive strategies. A holistic approach to behaviour management includes strategies for de-escalation. Physical Intervention must be proportionate and in the best interests of the child and must only be used as a last resort and as absolutely necessary for the shortest time possible.
- Risk assessments and management plans for physical intervention should be the product of an assessment made collaboratively by those professionally involved with the young person and their parents/carers, enabling a broad range of views to be taken into account. Wherever possible, pupils should be involved in this process. This risk assessment should form part of the individual’s behaviour management plan.
- Any intervention training should be sourced through an accredited provider such as The Institute of Conflict Management.

For further information contact the Coventry City Council Learning and Wellbeing Support Services Team Teach coordinators at teamteach@coventry.gov.uk or by calling 024 7678 8400.

Low Level Glazing / Window Restrictors

Low level glazing- key points:
- Schools must ensure the safe management of all glass and glazing products.
- Where assessment identifies the risk of falling against or through glazing, adequate precautions must be taken. This may include provision of suitable safety film, replacement with safety glass or provision of barriers.
- It is recommended that schools have a regular glazing survey undertaken by a competent contractor to determine the level of risk for all glazing installations, both internally and externally. Schools must take remedial action from any surveys undertaken.

Coventry City Council Occupier Support Service are able to carry out glazing surveys for schools. For more information contact: Occupier Support; e-mail: fmuoccupiersupport@coventry.gov.uk

Window restrictors- key points:
- Window restrictors are required in schools where pupils who are vulnerable to the risk of falling have access to windows, and/or the windows are at such a height where anybody falling out of them would be at risk of sustaining a serious injury.
- Schools must assess the risk to determine the potential for any adults or children to fall out of any window within their buildings.
- Assessments must be kept up-to-date and reviewed at least annually, or following an incident or significant change in building usage/activities that increases the risk of falls to vulnerable people.
Swimming/Hydrotherapy Pools

Key points:

- Swimming and its related activities are health-enhancing; learning to swim and being confident in water provide the essential foundation for many water-based recreational choices and is also an important life-saving skill.
- The safe management of swimming activities, swimming pools and hydrotherapy pools are an essential and important part of health and safety management for schools that undertake these activities.
- The LA’s health and safety standard for all swimming and aquatic activities are contained within the current edition of ‘Safe Practice in Physical Education and Sport’ published by the Association for Physical Education (afPE). www.afpe.org.uk
- This must be followed to demonstrate that risks associated with swimming both on and off the school premises are adequately controlled.
- Areas covered include:
  - general safe-practice
  - roles and responsibilities including training and competence for water safety
  - teaching and life guarding
  - safety routines and procedures for staff and pupils and swimwear and safety equipment
- Management and monitoring arrangements including supervision levels are also included as well as the use of hydrotherapy pools in special schools for children with specialist, complex physical difficulties.

Schools With Their Own Pools

- Must manage and operate their pool in accordance with Health and Safety Executive’s current guidance on Managing Health and Safety in Swimming Pools (HSG 179 document) and the Pool Water Treatment Advisory Group’s (PWTAG) current guidance; Swimming Pool water- treatment and Quality Standards for Pools and Spas.
- Schools with pools must have appropriate numbers of suitably qualified adults for the safe management of all swimming activities, i.e. teaching, supervising and lifesaving- as stated within afPE guidance.
- Persons managing the technical operation of swimming pool plant must be competent and attain an appropriate level qualification to PWTAG AND HSG 179 standards.
- In smaller pools and where only programmed swimming takes place, a two day pool operator’s certificate training course will meet these requirements.
- In larger pools and where unprogrammed swimming takes place, this must be a full three day pool plant operator’s certificate course.
- In order to maintain continued professional development, appropriate update training must be completed every 3 years.
- There must be at least two persons trained to these standards; one trained person must be on the school site at all times the pool is in use.
- The Chartered Institute for the Management of Sport and Physical Activity (CIMSPA) provide training www.cimspa.co.uk
• Other training providers used must be competent and cover the same training content
• Schools with pools must have robust pool safety operating procedures in place consisting of normal operating procedures, emergency action and appropriate risk assessments
• An annual maintenance inspection and service of the pool and plant must be undertaken by a competent specialist approved contractor
• An annual health and safety inspection of the pool must also be carried out by a competent person to identify and evaluate hazards and take appropriate action to remove any dangers. Checks of pool safety documentation, risk assessments and water testing records should form part of this process
• The inspection can be undertaken by the competent persons managing the pool or by another competent provider

Water Testing:

• A comprehensive programme and appropriate measures for cleaning, water testing and dosing of swimming pool water must be in place. The results must be in line with treatment and quality standards for pools recommended by the Pool Water Treatment Advisory Group
• Microbiological testing/sampling must be undertaken and carried out by a competent person – a member of an accredited laboratory, monthly in swimming pools, weekly in hydrotherapy pools
• More frequent samples will need to be taken where deterioration in water quality occurs or where contamination is found
• Water testing and microbiological testing results must be recorded
• Outdoor pools and other pools that close must be sampled prior to re-opening, the frequency determined by the competent person above undertaking/ advising on microbiological testing

Driving for Work and Transporting Children & Young People

Key points:
• Schools must ensure associated risks are adequately controlled for employees who drive for work purposes and when transporting children and young people in staff vehicles. This applies to off-site educational activities, sports events, performances and other field trips and events where members of staff use their own vehicles to transport pupils for school activities. A risk assessment must be completed for general minibus use, use of coaches and travelling within the duties of employment

Further information about driving for work purposes and the standards to be adopted by schools can be found in the City Council driving guidance

Tree Safety

Key points:
• Governing bodies, as persons in control of school premises must take reasonable steps to ensure the safety of the school site
• A survey of all trees on school sites must be undertaken at least once every five years by a suitably qualified Arboriculturist (minimum of LANTRA - professional tree inspection qualified)
• Schools must ensure that regular visual checks on trees are made, especially after adverse or severe weather. Any significant damage or concerns must be reported to your appointed Arboriculture Service Provider in order that an assessment can be made and that appropriate remedial action can be taken to ensure safety

For tree related issues and advice on schools sites, contact the Coventry City Council Urban Forestry Officer email: tim.wetherhill@coventry.gov.uk

Work Experience

Key points:
• Schools have a duty to ensure that young people on work experience are not exposed to significant risks to their health and safety
• Schools that provide work experience opportunities for their pupils should appoint a work experience coordinator. This should be a competent member of staff who is provided with sufficient time and resource to carry out the role effectively
• Schools that provide work experience placements on site should also refer to the Health and Safety Executive guidance document - Young people and work experience

Curriculum Specific

Under the Consortium of Local Education Authorities for the Provision of Science Services (CLEAPSS) constitution for schools, where the employer is the local authority, it is the employers (not the schools) legal duty to provide access to specialist technical information (i.e. CLEAPSS).

The legal responsibility requires that the LA ensures that schools receive competent specialist technical information and advice for higher risk subjects such as D&T, Art, Science and HET. This entails direct access to CLEAPSS resources and information, from suitably qualified specialist advisors.

As the employer, schools accessing CLEAPSS information through third party providers, such as those with Associate Membership of CLEAPSS would not be acceptable as evidence of competent advice. Associate Members can only review and translate the information available on the CLEAPSS web site, and are not permitted to give school direct access. Furthermore the Health and Safety Executive and CLEAPSS expect the LA where it the employer, to take out membership with CLEAPSS on behalf of the school.

Design and Technology

Key points:
• The safe management of design and technology environments, including their activities are an essential and important part of health and safety management in schools
- Potential significant risks can be associated with design and technology activities and the use of workshops and equipment in secondary schools
- Local Authority schools must adhere to CLEAPSS (guidance and British Standard 4163 - Health and Safety for Design and Technology in Schools and Similar Establishments- Code of Practice for Design and Technology
- Heads of Department and Subject Leaders must ensure suitable and sufficient risk assessments are developed and fully implemented for all Design and Technology activities and for safe use of machinery, tools and equipment
- CLEAPSS have produced model health and safety risk assessments for D&T equipment and activities for departments to use. These can be further adapted by each school to make them site specific
- Design and Technology equipment must be serviced and maintained in a safe manner by a competent contractor as part of the schools maintenance programme. Routine preventative maintenance should be undertaken by appropriately trained D&T technicians to ensure that equipment is in a safe condition to be used, e.g. adjustment of blades, lubrication of machinery, tightening of machinery drive belts etc.

The Design and Technology Association are able to provide further information and training for schools: [www.data.org.uk](http://www.data.org.uk)

**Physical Education and School Sport**

**Key points:**
- The LA’s health and safety standard for all physical education and school sport activities are contained within the current edition of ‘Safe Practice in Physical Education and Sport’ published by the Association for Physical Education (afPE) [www.afpe.org.uk](http://www.afpe.org.uk)
- This must be followed by schools to demonstrate that risks associated with PE and sports activities both on and off the school premises are adequately controlled. These standards cover:
  - Safe management and teaching principles; roles and responsibilities including training and risk assessment
  - Essential learning for safe practice and guidance for specific activities such as adventure, aquatics, athletics, combat, dance, games, gymnastics and trampolining etc.
- All schools should have at least one copy of the safe practice manual which should be shared with relevant school staff, i.e. PE heads of department/subject leaders and coordinators

**Science**

**Key points:**
- Science activities are an essential and important part of health and safety, particularly in secondary schools and pupils to experience science activities and experiments in a safe managed environment
- Science activities need to be appropriately managed to adequately control health and safety risks
• The LA’s health and safety standard for all science related activities in schools is the guidance produced by CLEAPSS. CLEAPSS is an advisory service providing support in science and technology for local authorities and schools
• Their advice covers a range of health and safety in science material including the provision and use of model policies and risk assessments, chemicals (hazcards), living organisms including animals, equipment, laboratory design and facilities, technician’s activities etc.
• It also covers guidance on supervision levels of pupils/students when undertaking practical activities and using laboratories
• CLEAPSS advice is by subscription as a member school which can be purchased through Coventry City Council’s Occupational Health, Safety and Wellbeing Service as part of a Service Level Agreement
• Staff in schools carrying out science activities must be trained and competent to carry out their role

Documentation:

• Science departments in secondary schools must have a separate health and safety policy in place, to include roles and responsibilities of teachers and technicians
• CLEAPSS have produced a model health and safety policy template for science departments to use which can be further adapted by each school
• Primary schools should follow guidance set out in the current ‘Be Safe – Health and Safety in Primary School Science and Technology’- published by The Association for Science Education

Ionising Radiation and Radioactive Substances

• Schools with radioactive substances must adhere and fully comply with the current version of CLEAPSS L93 document- Managing Ionising Radiations and Radioactive Substances in Schools and;
• Join the CLEAPSS Radiation Protection Advisor (RPA) service organised through Coventry City Council’s Occupational Health, Safety and Wellbeing Service or find an alternative provider acceptable to Coventry City Council
• All work with non-ionising radiation is notifiable as part of the requirements of the Ionising Radiation Regulations 1999. Schools that hold radioactive sources must inform the Occupational Health, Safety and Wellbeing Service and ensure that they notify the Health and Safety Executive. Both Occupational Health, Safety and Wellbeing Service and the HSE must also be notified when the LA ceases to be the Employer, i.e., when a school becomes an academy etc. A HSE notification can be completed online at https://extranet.hse.gov.uk/lfs/server/external/irr6
• Schools with radioactive substances must appoint a teacher in charge of radioactive sources as their Radiation Protection Supervisor (RPS); usually the Head of Science (or deputy), or Senior Physics Teacher
• They must be competent and have attended the relevant CLEAPSS training.
• A set standard operating procedures and contingency plans must be in place for the management of radioactive sources
• A full explanation of the roles listed above and their responsibilities are explained in the CLEAPSS L93 document
The CLEAPSS Radiation Protection Advisor (RPA) is Graham Hart and City Council Radiation Protection Officer (RPO) is Dave Ariss

For further information contact the Radiation Protection Officer on 02476 83 3908 or email: david.ariss@coventry.gov.uk

Further Information

If you require any clarification or further information in relation to this Standards Document or health and safety please email the Health and Safety Team at healthandsafetyservicesadmin@coventry.gov.uk
