Over the last couple of centuries we have consumed vast quantities of fossil fuels to power the worlds economies. The supply of these fuels is diminishing whilst demand increases pushing prices up. Burning fossil fuels also releases CO₂ emissions, the main cause of climate change which has catastrophic implications.

INECO Energy's mission is to accelerate the deployment of sustainable energy solutions to deliver Economic & Ecological benefits.

Benefits of LED Lighting

1. **Financial Savings**
2. **Improved Light Quality**
3. **Reduce Carbon Footprint**

Financial Savings	Environmental	Light Quality
Energy Saving	Lower Carbon Footprint	Employee well-being
Reduced Maintenance	Mercury Free	Flicker, dimming & glare
Long Lasting	Durability	Health & Safety
Increased Productivity	Compliance with regulations	No ultraviolet or Infrared light

ebm papst is currently the worlds leading manufacturer of energy saving motors and fans, employing in the region of 12,000 members of staff. Since 2005, the group has been winning multiple industry awards, repeatedly emerging as an “environmental pioneer” as well as adopting the ISO14001 environmental management system.

“The light levels are exactly what you said they’d be which was to CIBSE guidelines. As far as energy saving goes, they surpassed our expectations. I went to our directors and said we would save X amount – **We’ve probably saved double that to tell you the truth.**”

Planning & Ops Manager – ebm papst.
