The Coffee We Sip at Work

Alexandru Popescu

We Love a Good Coffee

Many of us enjoy a cup of coffee as part of our daily routine, but we often don't stop to think about how our coffee habits might be affecting the planet.

01/ The waste

Did you know that only 1 in 400 take-away coffee cups are actually recycled? The rest end up in landfills, or worse, in our oceans and natural environments, where they can take up to 500 years to break down.

Together we can do
much more

02/ The Coffee

coffee cultivation often involves the clearing of large areas of forest, leading to deforestation and habitat loss for many species. Additionally, conventional coffee farming practices often rely on the use of pesticides and fertilizers, which can pollute waterways and harm wildlife.

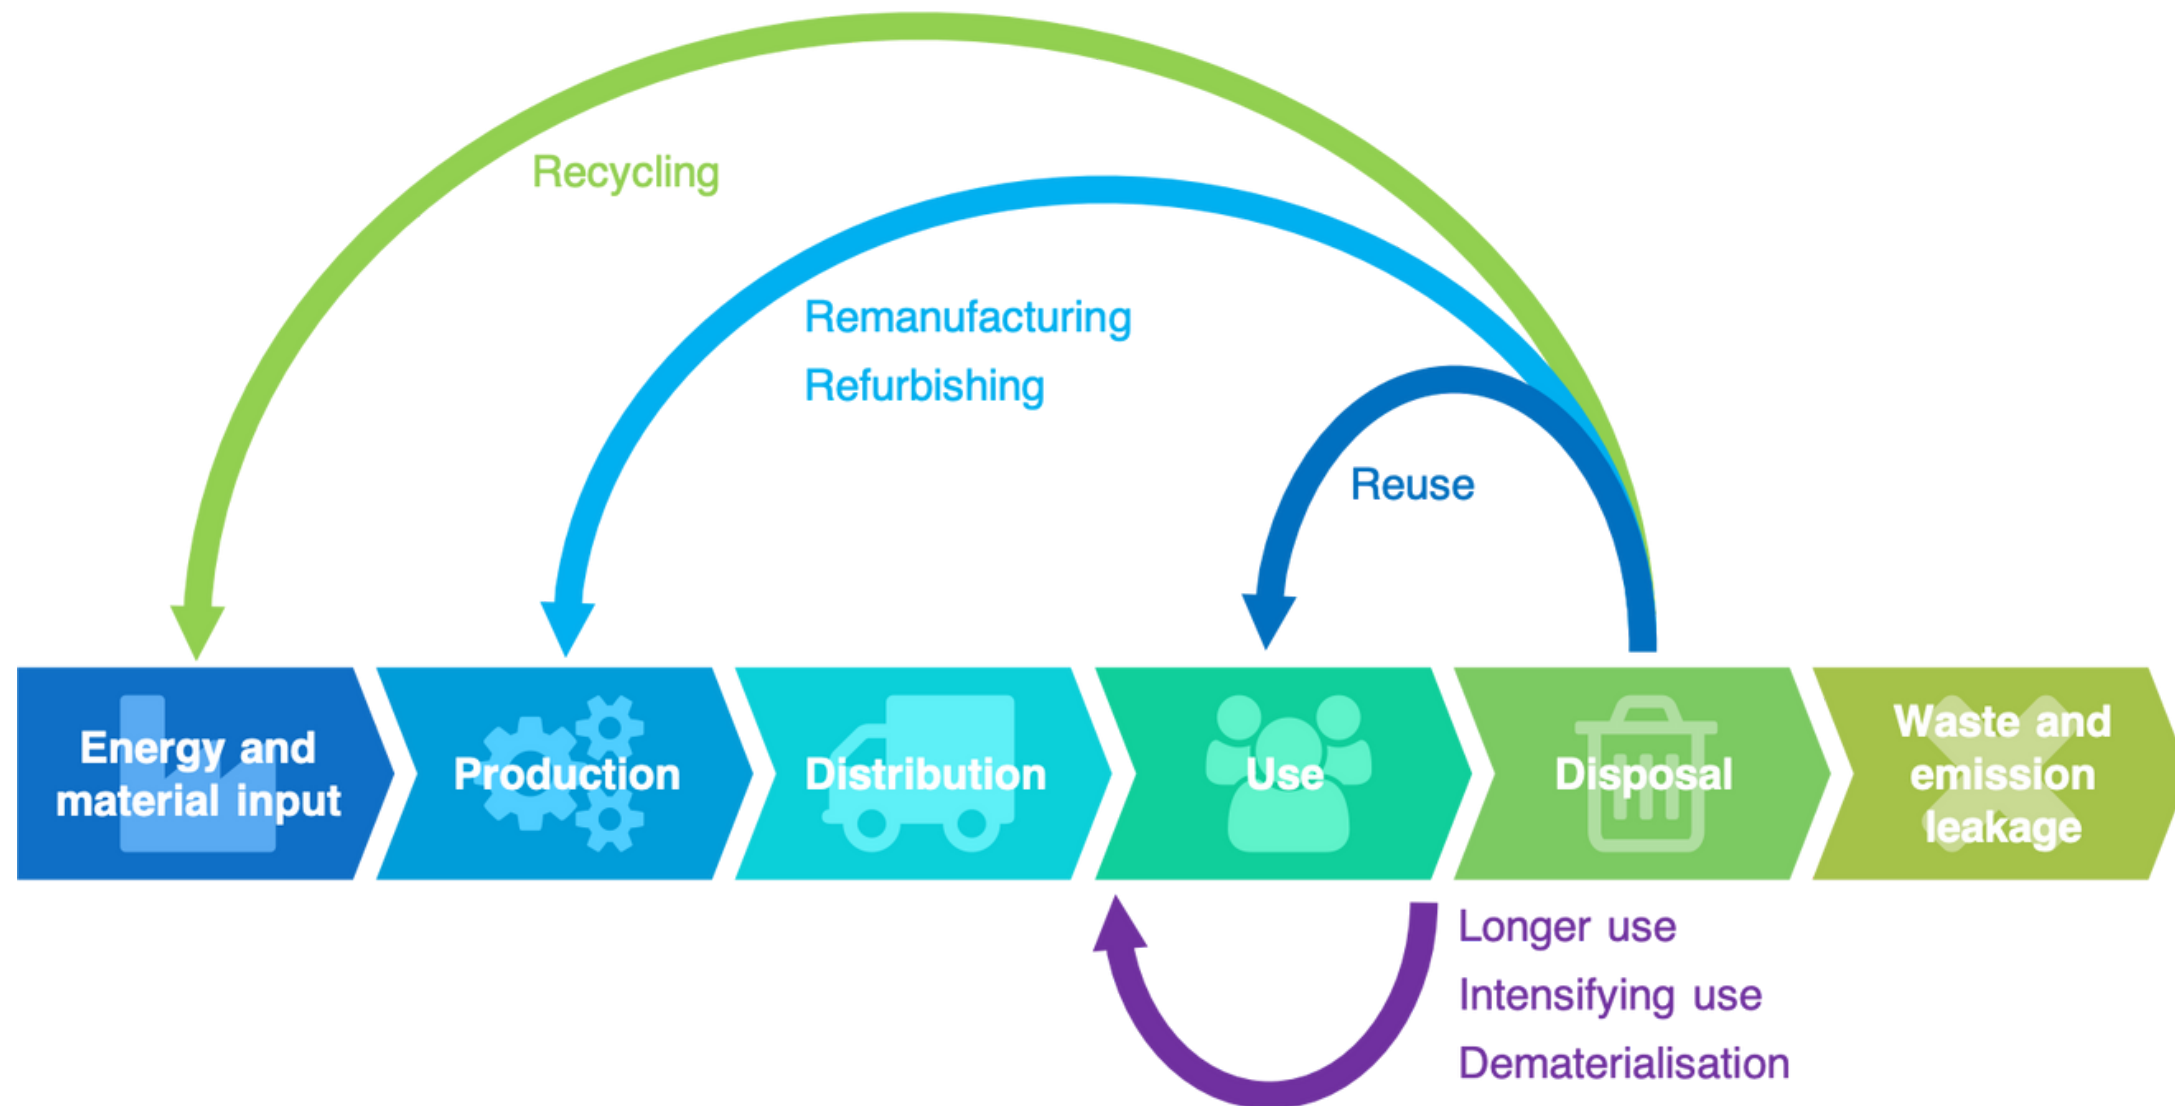

CIVET CAT

03/ The Solution

- Use home compostable packaging if you need something on the go
- The coffee you drink and use at work should be sourced ethically
- Re-usable mugs and bottles
- Keep it circular

This cup is made out of coffee beans and wood.

Thank you!
